Gerard Juan
Software Developer

SUMMARY

Software developer and former physiotherapist with a deep interest in healthtech and AI. I create and implement responsive and accessible web applications tailored to clients' specific needs using my skills in JavaScript, React, HTML, and CSS.

WORK EXPERIENCE

Freelance Web Developer, Toronto, ON

Sept 2023 – Present

- Collaborated with a designer to build a website from scratch for a healthcare professional
- Helped conduct UX research via virtual interviews and the creation of an affinity map to identify key features for the website.
- Responsible for hosting, measuring traffic / performance in Google Search Console, and improving SEO

Software Developer at Juno College of Technology, Toronto, ON

March 2023 – June 2023

- Collaborated with a team of developers to build modern and responsive web applications using best practices
- Built semantically structured full stack web applications

Physical Therapist

2020 – 2023

- Worked in various orthopedic clinics and provided in-home physical therapy for clients around the Greater Toronto Area.

Recent Projects:

Physiothenix – Website for a client's physiotherapy and personal training business. Utilizes the Google Places API to dynamically fetch reviews.

- Live: https://physiothenix.com/

Earthquake Detection Program – Single-page application tracking earthquakes over the last 24 hours, using the USGS API. Includes an interactive map with markers displaying the location of each earthquake.

- GitHub: https://github.com/earthquake-project-four/earthquake-detection-program-project-four
- Demo: https://dynamic-unicorn-54fb8e.netlify.app/

Random Workout Generator – Allow a user to randomly generate a workout with the option to filter for muscle group. Uses the wger Workout Manager API.

- GitHub: https://github.com/gerrysberries/random-workout-generator
- Demo: https://randomworkoutgenerator.netlify.app/
